Decelith® PVC Compounds

Stand out from competitors.

PCW GmbH is your specialist for innovative and application-oriented plastic compounds with worldwide delivery capability. Decelith is the trade name of a thermoplastic material based on PVC, the production of which began in 1936. In its early days, the name was particularly popular thanks to the Decelith sound foil, the first German “vinyl record”. After many years of development, we can now offer you a variety of coloured vinyl records. Find now the right one for your company.

1887

PCW GmbH, founded in 1887 under the name „Deutsche Celluloid Fabrik“ at the Eilenburg site.

One of the world’s oldest PVC compounding companies - associated with the history of the vinyl record.

1930s

The brand name „Decelith“ had been the basis for the production of vinyl records since the mid-1930s.

1950s

With the advent of the magnetophone in the early 1950s, the vinyl record began its triumphant advance until the

1980s

introduction of the compact disc in the mid-1980s.

For some years now, the vinyl record has evolved from a niche existence to a hip phenomenon again.

PCW GmbH is at the centre of this development.

Continuous product developments under the brand name „Decelith“ again serve as the basis for the production of the new record generation.

The familiar black vinyl record is complemented by a wealth of innovations in material composition. In addition, all colours of the rainbow and even fluorescent material can be provided.

now

PCW GmbH supplies record companies all over the world with high-quality granules.
